

Outdoor 150 PSI High Pressure Steam Boilers Power Burner Fired

PRODUCT DESCRIPTION

Rite Power Burner Fired High Pressure Steam Boilers have been providing our valued customers with high quality steam safely and reliably for over forty years. From food processing to textiles, hospitals to industrial process manufacturing – these heavy duty, watertube steamers are available in 16 different models, ranging from 398 – 10,456 MBH input (9.5 – 250 Boiler Horsepower) for the widest selection possible.

So simple to maintain and operate, Rite Steam Boilers feature **complete waterside access** so that virtually all scale and mud deposits can be seen and mechanically cleaned during a single scheduled maintenance shutdown. The result – **Better fuel-to-steam efficiency and lower operating cost over the life of your boiler investment.** Consider a few of our other standard features: Rite's floating heads that eliminate pressure vessel cracks and broken welds caused by thermal stress cycling (backed by our **25 Year Thermal Shock Warranty**), Rite's "superheated" drying tubes that regularly boost steam quality at the nozzle into the 99%+ range, Rite's bolted/gasketed headplates that eliminate any possibility of hydraulic explosion in the event that safety devices fail – and you have a better boiler by design.

RITE POWER BURNER FEATURES

Rite Power Burner Fired High Pressure Steam Boilers must be specified when: Low NOx emissions are required or fuels other than natural gas will be used. While Power Burners are more expensive and use more electrical power than atmospheric, they do have one advantage: by controlling the amount of air they use for combustion, Power Burners achieve higher combustion efficiencies than atmospheric – especially at less than full fire rate.

RITE POWER BURNER FIRED BOILERS vs. "FORCED DRAFT BOILERS"

Both use Power Burners to combust the fuel, but the similarities end there. Forced draft boilers require larger fan motors to "push" the products of combustion out a sealed combustion chamber and into a positive pressure stack. Should a leak develop in the combustion chamber or stack of a forced draft boiler – potentially toxic flue gasses could escape into the boiler room.

Rite Power Burner Fired Boilers use smaller fan motors to combust the fuel only. All Rite Boilers are designed to operate with negative pressure combustion chambers and stacks, which means flue gasses are **safely** under negative draft conditions from the time the fuel is burned until they exit the stack.

Outdoor 150 PSI High Pressure Steam Boilers Models & Ratings / Power Burner Fired

STACK / DRAFT REQUIREMENTS

- UL listed for use with Type B Vent when power burner is for natural or L.P. gas fired only.
- Type 316 stainless steel lined stack is required when equipped with #2 oil or combination gas & #2 oil burner.
- Recommended stack height for natural or L.P. gas fired burners is 6 feet
- Recommended stack height for #2 oil or combination gas & #2 oil fired boilers is 10-12 ft.
- The stack should be supported independently of the boiler
- A minimally restrictive rain cap with integral down draft protection (supplied by others) is required.
- Proper draft range is between -.05" to -.09" water column.

AIR REQUIREMENTS

- Adequate Combustion/Ventilation Air is vital for safe, efficient operation. Refer to the latest edition of the Uniform Mechanical Code or consult your local Building and Safety Department for specific requirements.

ELECTRICAL REQUIREMENTS

- A single point 1 or 3 phase supply is required to the burner panel. See separate Burner Price Lists for standard electrical power requirements.
- Separate electrical supply may be required to operate boiler feed pump.

NATURAL GAS SUPPLY REQUIREMENTS

- Refer to burner specification sheet or quote.

PROPANE GAS SUPPLY REQUIREMENTS

- Refer to burner specification sheet or quote.

ELEVATION DERATION

Ratings given below are for elevations up to 2000 feet. Above 2000 feet, ratings should be reduced at the rate of 4% for every 1000 feet above sea level.

FEEDWATER SYSTEMS & BLOWDOWN TANKS

Rite manufactures a complete line of Condensate Return Feedwater Tanks and Blowdown Tanks for our Steam Boilers shown below.

* Add **G** for natural gas or propane, **O** for #2 oil or **GO** for combination gas & #2 oil.

Outdoor 150 PSI High Pressure Steam Boilers Models & Dimensions / Power Burner Fired

TOP VIEW ④

RIGHT SIDE VIEW ④

REAR VIEW ④

- DIMENSIONS ARE IN INCHES - SUBJECT TO PRODUCTION TOLERANCES AND CHANGE WITHOUT NOTICE. CERTIFIED DIMENSIONS AVAILABLE UPON REQUEST.
- BOILERS APPROVED FOR INSTALLATION ON NON-COMBUSTIBLE FLOORS ONLY.

- ① Barometric Damper will be shipped one size smaller than **D** dimension for stacks up to 25 feet of vertical height (as shown below in column **E**), full size (same as **D** dimension) for stacks 25 to 50 feet tall and one size larger for stacks over 50 feet tall. Barometric Damper Tee by others.
- ② May vary - sizes shown are for UL gas trains at standard supply pressures. Gas connections can be male or female NPT. All other threaded connections are female NPT.
- ③ 1-1/2" and 2-1/2" connections are Female NPT. 4" and 6" flanges are ANSI 300 lb. SA-105 raised face. Flanged outlets may be reduced upon special request and/or supplied ANSI 300 lb SA-105 raised face.
- ④ Standard right hand construction shown illustrated above. Left hand construction available at no extra charge.
